

FEATURES

- The SR406 -M3 is a true one-port, Surface-acoustic-wave(SAW) resonator in a low-profile, M3 case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency transmitters operating at 406.00MHz.

APPLICATIONS

- Remote Control

NOTE

1. Electrostatic Sensitive Device. Observe precautions for handling
2. Freq. aging is the change in f_c with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temp. above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
3. The center freq., f_c , is measured at the minimum insertion loss point, IL_{min} , with the resonator in the 50 Ω test system (VSWR $\leq 1.2:1$). Typically, $T_{oscillator}$ or $f_{transmitter}$ is appr. equal to the resonator f_c .
4. Typically, equipment utilizing this device requires emissions approval, which is the responsibility of the equipment manufacturer.
5. Unless noted otherwise, case temperature $T_c = +25^\circ C \pm 2^\circ C$.
6. The design, manufacturing process, and specifications of this device are subject to change without notice.
7. Derived mathematically from one or more of the following directly measured parameters: f_c , IL, 3 dB bandwidth, f_c versus T_c , and C_o .
8. Turnover temperature, T_o , is the temperature of maximum (or turnover) freq., f_o . The nominal center freq. at any case temp., T_c , may be calculated from: $f = f_c [1 - FTC (T_c - T_o)^2]$. Typically, oscillator T_o is appr. equal to the specified resonator T_o .
