

FEATURES

- The SF868.35-M3 is a low-loss, compact, and economical surface-acoustic-wave (SAW) filter de-signed to provide front-end selectivity in 868.35MHz receivers.

APPLICATIONS

- Communication

NOTE

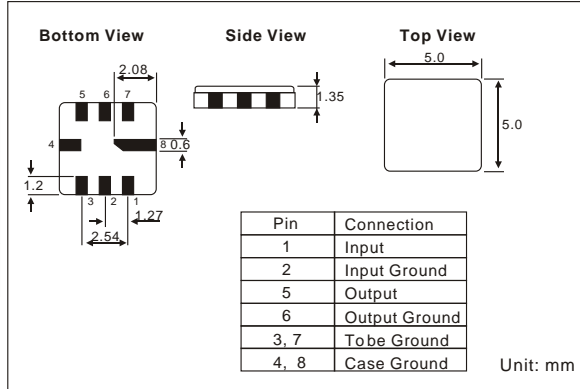

1. Electrostatic Sensitive Device. Observe. Precautions for handling
2. Unless noted otherwise. All measurements are made with the filter installed in the specified test fixture which is connected to a 50 ohms test system with $VSWR \leq 1.2:1$. The test fixture L and C are adjusted for minimum insertion loss at the filter centre frequency, fc. Note that insertion loss and bandwidth and passband on the impedance matching component values and quality.
3. The frequency fc is defined as the midpoint between the 3dB frequency.
4. Where noted specifications apply over the entire specified operating temp. Range.
5. The turnover temperature, To, is the temperature of maximum (or turnover)/freq. Fo. The nominal freq. At any case temp. Tc, may be calculated from: $f = [1 - FTC (To - Tc)]^2$.
6. Freq. Aging is the change in fc with time and is specified at +65°C or less. Aging. May exceed the specification for prolonged temp. Above+65°C. Typically, aging is greatest the first year afire manufacture, decreasing significantly in subsequent years.
7. The design, manufacturing process, and specifications of this device are subject to change without notice.
8. All equipment designs utilizing this product must be approved by the appropriate prior to manufacture or sale.
