

FEATURES

- The SF433.92-M3 is a low-loss , compact, and economical surface-acoustice-acoustic-wave (SAW) filter de-signed to provide front-end selectivity in 433.92MHz receivers.

APPLICATIONS

- Communication

NOTE

1. Electrostatic Sensitive Device. Observe precautions for handling
2. Unless noted otherwise, all measurements are made with the filter installed the specified test fixture which is connected a 50 ohms test system with VSWR≤ 1.2:1. The est fixture L and Care adjusted for minimum insertion loss at the filter centre freq., fc. Note that insertion loss and bandwidth and passband shape are dependent on the impedance matching component values and quality.
3. The frequency fc is defined as the midpoint between the 3dB frequencies.
4. Where noted specifications apply over the entire specified operating temp. Range.
5. The turnover temp. To, is the temp. Of maximum(or turnover) freq.fo The nominal freq. At any cade temp., Tc, may be calculated from:f=fo[1-FTC (To-Tc)<sup>2</sup>].
6. Freq. Aging is the change in fc with time and is specified at +65°C or less. Aging may exceed the specification for prolonged. Temp. Above +65°C Typically aging is greatest the first year after manufacture, decreasing significantly in subsequent years.
7. The design, manufacturing process, and specifications of this device are subject to change without notice.
8. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
